

## To install the 1776CASH wallet on a MacBook Pro

To install the 1776CASH wallet on a MacBook Pro, download the official **.dmg** file from the **1776CASH website** at <https://freedom.buzz/1776cash>

Once downloaded, **run the installer** and follow the prompts to copy the **1776CASH App** to your **Applications folder**. The first launch will require downloading the full blockchain, which takes approximately **less than 1 hour** with a fast internet connection and needs at least **25GB** of disk space.

Set your computer not to sleep or hibernate and leave your computer running until the blockchain is downloaded.

You will not see any 1776CASH coins in your wallet until the blockchain is downloaded and synced.

## To install the 1776CASH Core Wallet on Linux

To install the 1776CASH Core Wallet on Linux, download the latest binary from <https://freedom.buzz/1776cash>

**The recommended method involves downloading the appropriate tar.gz archive for your CPU architecture (Intel/AMD or ARM), extracting it, and running the installation script.**

### Prerequisites and Installation Steps

- **System Requirements:** The wallet requires a system with **Windows, Linux, or MacOS**, a CPU of at least **2GHz, 2GB of RAM** (4GB recommended), and at least **25GB of available disk space**.
- **Download:** Use the command line to download the latest version, for example:
- **Extract and Install:** Unzip the archive and navigate to the folder, then run the parameter installation script:

```
./install-params.sh
```

- **Launch:** Start the wallet by navigating to the bin folder and running the CLI or GUI executable:
- `cd bin`
- `./1776CASHd -daemon # For CLI`

```
./1776CASH-qt # For GUI
```

Alternatively, users on Ubuntu 16.04 or later can install the wallet via Snap using `sudo snap install 1776CASH-core`. Once launched, the wallet will download and verify the entire 1776CASH blockchain locally, a process that takes approximately **less than 1 hour** with a fast internet connection.

Set your computer not to sleep or hibernate and leave your computer running until the blockchain is downloaded.

You will not see any 1776CASH coins in your wallet until the blockchain is downloaded and synced.
